

Rectangular section 11 foot straight oar with 4mm ply blade

Blade shape is whatever takes your fancy. Ours is a nod towards old Norse blades.
This oar can be made from cheap CLS building timber as long as you select clear bits.
Standard sizes of CLS timber are 38mm x 89mm and 38mm x 140mm, 4800mm or 6000mm long.
Some protection from friction either thin wood or leather will help at the kabe position.
Our kabe position was between 840mm (top gear) and 940mm (bottom gear) from the handle end.
